SUMMARY

Full-stack engineer and solo builder focused on developer tools, internal tools, webhook/API systems, workflow automation, and AI-assisted product workflows. Strong background in frontend architecture, interactive applications, and full-stack product delivery. Most useful on products that involve real workflow complexity, reliability concerns, technical tradeoffs, and practical implementation rather than generic brochureware.

BEST-FIT WORK

- Developer tools, internal dashboards, automation-heavy products, and engineering utilities.
- Webhook/API integrations, debugging systems, replay/validation flows, and workflow infrastructure.
- AI-assisted product workflows, agent-tooling infrastructure, MCP/design-to-code pipelines.
- Performance-sensitive frontend and full-stack engineering for products that handle real data at scale.

SELECTED PRODUCT WORK

Webhook Debugger and Logger

Enterprise-grade webhook testing suite: capture, inspect, replay, forward, validate (JSON Schema), mock, and stream events in real time. SSE live streaming, signature verification, SSRF-conscious forwarding.

Additional open-source / freemium proof

- OpenCart 3.x:** Published marketplace extension.
- Mosaico CodeIgniter:** Open-source WYSIWYG email editor integration.
- OpenBiz / Generic Repository Pattern:** ASP.NET MVC, Entity Framework, supply-chain management.
- Bookstore / Shopping Cart Library:** Vanilla PHP; used by hundreds on phpclasses.org.
